

Team Oranges

Model	Vocabulary	Correct Labels	Answers w/o Guessing	Accuracy
word2vec-google-news-300	300000	70	1	0.89
glove-twitter-100, 1193514	1193514	36	11	0.52
glove-wiki-gigaword-100,400000	400000	64	2	0.82
glove-twitter-25	1193514	33	11	0.48
glove-twitter-50	1193514	35	11	0.51

Accuracy of Each Model

- Random Baseline: We took the average of all the model's accuracy, including the human standard
- Human Standard: We noticed that the human standard was a bit lower than google's word2vec model

Analysing our data and speculation on why some model performs better than others

- We believe that the guess count on our chosen models may have hindered the accuracy.
 - Could've had higher accuracy (Or lower)
- The twitter model has around the same accuracy, regardless of embedding size
 - The Vocabulary size is the same for twitter
